## Technical Skill Summary

---

In the recent three years, I have developed the following while on Version Control Systems such as Git:

- Web applications with node.js at the backend; React.js at the frontend; and MySQL as the database.
- Web applications with C# .NET or VB.NET as the backend; AngularJS at the frontend; and SQL Server and third-party web services that have their own storage architecture.

## Professional Experience

---

### **Full Stack Developer at Total Synergy**

**Apr 2020 – Current**

Total Synergy creates a digital wingman for architects, engineers and constructors to help manage their projects and company so they have more time to design.

Significant projects:

- Implementing cloud management integration with Sharepoint using Microsoft Graph API.

### **Analyst Programmer at Prosegur Australia**

**Sep 2017 – Mar 2020**

Prosegur Australia provides secure cash management solutions to large enterprises like Westpac and small and medium companies like gyms and pubs.

Significant projects:

- Implementing features on a desktop web application, using AngularJS, JavaScript, C# .NET and SQL Server.
- Implementing features on a mobile-friendly web application, using AngularJS Material.

- Implementing features on a cross-mobile platform app, using Cordova.
- Practises SCRUM development using Azure DevOps.

### **Developer at WiseTech Global**

**Dec 2012 – Dec 2016**

WiseTech Global develops leading enterprise software in the logistics field and has over 6,000 customers in over 125 countries.

Significant recent projects:

- Refactored the Human Resources module using SOLID principles and Test Driven Design with C# .NET WinForms so more features can be more easily implemented without breaking existing features.
- Implemented features on the Human Resources module, such as being able to view at a glance or in detail of the latest result of an in-house test an applicant has completed, using C# .NET WebForms and JavaScript.
- Documented the Human Resources module for the incoming Human Resources product manager to peruse and for knowledge transfer to other developers.
- Implemented an email add-on in an enterprise system, which could be used on any record-based module without breaking existing email features, using C# .NET WinForms.
- Solved issues on heavy logic sales reports, such as some records not being displayed, using T-SQL and automated tests in C#.
- Mentored interns who were in their first year or last year of university and were doing their 6 months work placement.

## **Extracurricular Activity**

---

### **Software Developer at SMASH! Inc**

**Nov 2018 – Current**

SMASH! Inc organises the annual SMASH! Sydney Manga and Anime Show, one of the largest anime, manga and games conventions in Australia.

Duties

- Implementing features on our web application, which uses React.js, node.js, express and MySQL.
- Reviewing implemented features of fellow Software Developers using Bitbucket.

- Creating and reviewing documentation on Confluence such as technical designs of the web application.

## **Education Background**

---

**Bachelor of Science in Information Technology,** **Jun 2017**

**Diploma in Information Technology**

**Professional Practice**

University of Technology, Sydney

**Front-End Web Development**

**Jun 2017**

General Assembly

## **Referees**
